SAMSUNG

Built for the new way you work.

Work smarter with intuitive tools that integrate business and life.

Protect your business data and keep your personal information private

Confidential reports. Private documents. Family photos. They all coexist securely on the Samsung Galaxy Note7 with defense-grade, award-winning* Samsung Knox security. This built-in platform uses container technology to keep sensitive files and personal data separate and protected. In addition, the Galaxy Note7 comes with iris scanning and a fingerprint sensor for enhanced security.

Keep a competitive edge at work and beyond

Professional and personal lives are blurred more than ever. The Galaxy Note7 is great for helping you excel at both. The new, enhanced S Pen features a more accurate tip and more pressure points for a more natural writing experience, whether you're jotting down your next big idea or updating your grocery list. The 5.7" QHD AMOLED display gives you a bright, crisp view of critical documents or critically acclaimed shows, even leaving room for easy multitasking. The sleek edge design gives you fast access to the people, apps and alerts that are most important.

Power up to get it done whenever and wherever

Between a calendar full of meetings and a list of errands to run, every day demands a device that can keep up wherever your life takes you. The Galaxy Note7 keeps you powered up all day[1] thanks to its large battery capacity and ultrafast and wireless charging[2]. An IP68 dust- and water-resistant[3] design defies the elements so you can keep going, rain or shine. For presentations, pictures, playlists and more, the Galaxy Note7 comes standard with 64GB of memory[4] so you can take it all with you, and an expandable memory up to 256GB via microSD storage[5] can handle even the fastest-growing content library.

Seamless integration ensures ideal user experiences

New devices shouldn't be a headache for you or your IT team. With the Galaxy Note7, you'll have no problem using all your favorite apps at the office or at home. Built-in compatibility with the most popular enterprise email providers and easy integration with existing management tools and servers makes integration a breeze. The Galaxy Note7 also features a USB Type C port[6], so you can transfer data and power faster.
