Key features

Ultra HD 4K imagery

Brilliant, detailed and crisp images ensure every student remains engaged in the lesson, regardless of where they are in the classroom. Lesson content comes to life on the display, so students easily see all of the details without missing any essential information.

Premium touch experience

Leveraging our 20 years of experience in touch technology, the display has a low friction coated surface that delivers natural touch functionality. This keeps lessons running seamlessly as the display's responsiveness is immediate and the smooth glass prevents burn on your finger.

Pen and object ID

Simply walk up and start using the display. The SMART Board detects if you're using a finger, pen or eraser, saving the time and confusion spent on having to manually change modes. SMART's first display with Pen ID, you can write in differently colored ink with the pens, simultaneously, so you're not locked into the choice of your partner.

Seamless collaboration

Two students can simultaneously use touch gestures on the display. They're drawn to the interactive display and naturally begin to collaborate in a seamless, fun and engaging way – developing essential collaboration skills without even realizing it.
